Next-Gen Cybersecurity for Women's Digital Safety

GDG CODE4HER HACKATHON 2026 • TRACK 2

## The Problem

> *"Every 10 minutes, a woman in India faces digital harassment or cyber-extortion. Most victims feel isolated and don't know how to differentiate a genuine conversation from a manipulative scam."*

Digital platforms have become a breeding ground for **Love Bombing, Sextortion, and Advance-Fee scams**. Traditional security tools block links, but they can't understand the **psychological tactics** used in chat conversations.

## The Solution

ConvoShield AI acts as a **cognitive guardian**. It uses advanced Large Language Models to analyze chat history and detect patterns of manipulation before harm occurs.

`NVIDIA NIM LLM` `React.js` `Tesseract.js OCR` `Chrome Extension API`

## Key Innovation

### Dual-Layer Shield

Real-time WhatsApp Web monitoring via extension + Deep-dive web analyzer.

### Screenshot OCR

Don't want to copy text? Just upload a screenshot, and our AI reads and analyzes it instantly.

## Project Features

### Tactic Library

Real-world encyclopedia of manipulation tropes.

### Risk Gauge

Probabilistic risk scoring with visual heatmaps.

### Direct Help

One-click access to National Cyber Crime Helplines.

## Why ConvoShield Wins

| 100% | Real-Time | NVIDIA |
| --- | --- | --- |
| PRIVACY FOCUSED | DETECTION | AI POWERED |

"We don't just detect scams; we educate women to recognize the invisible red flags of the digital age."
